No Cindy. They did a 9 am call (and Iforgot).

Apparently not much reported.

Thanks for the info.

Just curious, not essential. First time I think I heard mention of Method 8270 was this info from Raj.

Is this that different from Method 524, what Dupont used/developed, and the GC/MS methods the downstream utilities are using? ?

Was there a call at 11am?

We received standard and source material. Folks are going to try and check out on instruments today but not everyone here because of snow. ERT was able to use method 8270 (GC/MS) so that is a good sign. We would like to verify their method modifications and the QL (0.5 ppb-0.6 ppb).

For now we don't have anything to report.

Hi Cindy,

Fran asked if you could provide an update on your work obtaining a standard, potentially doing any analyses, etc.

.....and, if you forward this info, do you want him to put in a Hotsite Report?

Thanks for all of your help.

Jack
